

API Security Operationalization and Advisory Services

Protect your APIs and realize value through expert security guidance and customization

Securing your APIs and safeguarding your data is essential to protect against revenue loss and data exfiltration.

API Security Operationalization and Advisory Services

With Akamai’s **API Security Operationalization and Advisory Services**, you can ensure your APIs maintain a strong security posture. This service is staffed by top-tier specialists who consistently engage with you, assess your API business use, and, most important, enhance protection through regular security reviews and ongoing improvements.

For enterprises with multiple business units, the high-touch individualized approach provided by this offering is key to successfully managing the risk of your APIs.
