

Akamai Threat Intelligence Service (ATIS)

Organizations today face sophisticated cyberthreats that are increasingly amplified by AI. These attacks target both businesses and their customers. Attackers frequently target specific regions and sectors linked to geopolitical shifts or financial gain.

Akamai Threat Intelligence Service (ATIS) delivers relevant and actionable intelligence regarding global cyber adversaries, attack methodologies, and cybersecurity trends. Using the expansive reach of Akamai's global platform, the service equips organizations with the specialized insights and comprehensive expertise required to establish a robust, proactive defense against sophisticated cybersecurity threats.

Akamai Threat Intelligence Service converts global attack data into localized security action

Today, sophisticated attackers target specific industry sectors and take advantage of volatile geopolitical situations. To maintain effective security posture, organizations require comprehensive context rather than mere raw datasets. Akamai Threat Intelligence Service converts vast global data into the specific, actionable intelligence that security teams need to protect their infrastructure.

Field-driven intelligence from the source

Unlike services that rely only on external aggregators, ATIS uses Akamai's unique global vantage point. We combine data from massive attack databases with firsthand insights from our global security experts. This means our intelligence is proven in real-world environments against the world's most persistent threat actors for organizations just like yours. We don't just tell you what is happening; we tell you what it means for your specific infrastructure and how to act before it causes disruption. Select Akamai customers have benefited from this intelligence for two years — now we're making it available to everyone.

A multilayered defense strategy

ATIS is designed to support both your long-term strategic planning and your immediate tactical responses. Our monthly and quarterly threat reports provide detailed analysis of trends across Layer 7 and Layers 3/4, tailored for each industry and region. These reports allow your leadership to allocate resources based on proven shifts in the threat landscape.

Benefits for your business

Reduce risk proactively

Reduce the likelihood of breaches and avoid disruption to your business by prioritizing defenses against the most active and impactful threats for your region and industry.

Optimize security investment

Focus resources on the most likely and impactful attack modes and threat actors to achieve the best return on your security investments.

Reduce strategic risk

Align your security strategy with highly relevant, forward-looking insights on global threat trends to maximize your risk reduction.

Augment staff

Supplement your internal team with Akamai's highly experienced global security experts.

Strengthen collaboration

A key differentiator of ATIS is integration with your Akamai service and support team that fosters true collaboration. This cooperation enables effective management of digital assets and strengthens security operations, equipping your organization with the expertise required for a robust defense against evolving threats.

To address immediate operational risks, Akamai provides proactive, high-speed intelligence through threat awareness bulletins and threat actor profiles. When new vulnerabilities or adversaries emerge, ATIS delivers the technical methods needed for identification and mitigation. This keeps your defense agile.

Strategic advisory services and expert consultation

A primary differentiator of ATIS is the integration of specialized human expertise into the security framework. The service provides clients with direct access to Akamai cybersecurity experts via customized threat briefings. During these quarterly sessions, organizations review strategies and obtain guidance regarding unique risk vectors. This ensures your cybersecurity posture remains synchronized with global intelligence.

Key features

Monthly security reports

Analyses of recent application and infrastructure security attacks for specific industries and regions

Quarterly security reports

Analyses of application and infrastructure attack trends for the last quarter to identify macro-level shifts

Threat awareness advisories

One or more topical and timely advisories per month about notable attacks and emerging risks

Threat actor profiles

One or more detailed dossiers per month on dangerous adversaries, with specific blocking guidance

Spotlight reports

Monthly deep dives into critical subjects like protecting against AI threats and conflict-driven attack activity

Custom threat briefings

Quarterly live sessions with ATIS experts to review strategy and risks specific to your business and attack surface

Multilingual support

Security reports and custom briefings delivered in six languages (EN, ZH, JA, KO, PT, ES) to support global operations

Ready to fortify your defenses with field-driven intelligence?

Get started with Akamai security experts today to see how ATIS can provide the visibility you've been missing.

- **Platinum Service and Support customers:** ATIS is available as an optional sub-module.
- **Managed Security Service (MSS) customers:** ATIS is available as an add-on.
- **Other customers:** ATIS is available as a standalone product.
