

Akamai solutions help the largest government-owned bank in the Philippines protect eBanking services against cyber threats

“ Our primary goal was to have a perimeter solution in place because of the current landscape of the [banking] industry [in Philippines]. We saw the value Akamai brings to us in terms of the intelligence and performance of the solution, especially on security, DDoS mitigation and content delivery.

— **Archival Tolentino**, Chief Security Officer, LANDBANK

The Situation

LANDBANK, the largest government-owned bank in the Philippines, is a full-service commercial bank evolved from its initial role as the financing arm of the agrarian reform. Today, LANDBANK is the largest credit institution in the rural areas. Its credit delivery system is able to penetrate a substantial percentage of the country's total number of municipalities. As of April 2017, the bank has 372 branches and 1,647 ATMs nationwide.

As part of its continuous innovative expansion strategy to better serve its customers and reach unbanked Filipinos with services such as eBanking solutions, LANDBANK recognized the importance of securing its online applications such as ePayment and online remittances services while improving the customer experience.

The Challenge

Upon noticing the upward trend in DDoS attacks and data breaches in the Philippines and globally, LANDBANK was determined to be proactive against any potential threats. As Archival Tolentino, Chief Security Officer of LANDBANK, puts it, “We understood that attacks are on the rise and before something serious happened, we wanted to put the solutions in place — secure the bank before any actual emergency arises and be ready in case we do in fact have to respond to a situation.”

The Goals

- **Secure the bank from DDoS, DNS, and application attacks.** The bank wanted to pre-emptively take measures to protect itself against any possible threats in the future.
- **Simplify the digital transformation journey.** The bank needed a strategic partner to make the move to digital as effortless and secure as possible.
- **Gain ability to respond during attack.** The bank needed to have the means to mitigate and respond effectively to attacks.

Why Akamai

Choosing a trusted partner

One of LANDBANK's criteria was to have a highly responsible and reliable team, which led them to consult PLDT, a longtime partner of its digital transformation journey. In turn, PLDT recommended Akamai's suite of security solutions for its sheer scale within and beyond the Philippines, plus a proven track record of defending against large-scale and complex attacks for financial services organizations. Beyond consultation, PLDT provided a localized onboarding process.

Archival adds, “We currently have 11 websites that are customer facing, and we can already see great performance on all, especially in terms of content delivery network.”

COMPANY

LANDBANK
Manila, Philippines

INDUSTRY

Financial Services

KEY IMPACTS

- Blocked 100% of the incoming malicious traffic
- Guarded the company against DDoS, DNS, and application attacks
- Simplified the digital transformation journey
- Total average origin offload of 87.5%
- Saved an estimated five months in deployment time

LANDBANK

Fast deployment and offload

Akamai's extensive coverage across the Philippines and ease of deployment saved LANDBANK an estimated five months of deployment time compared to a traditional hardware approach. Akamai's always-on protection immediately provided the scalability and capabilities required to defend large DDoS attacks as well as attacks against web applications and direct-to-origin attacks. Another benefit was a total average origin offload of 87.5%.

Improved security posture

Part of the solutions for LANDBANK included Security Optimization Assistance where Akamai blocked 100% of incoming malicious traffic, which, as Archival puts it, "significantly offloads the work for the internal security devices." Since the malicious traffic never really makes it through the first line of defense, the internal security devices have a lot less to deal with. Akamai also provided data and analytics, offering visibility into attacks and aiding in the consistent fine-tuning of WAF rules to stay up to date against the latest threats.

About LANDBANK

Land Bank of the Philippines (LANDBANK) is a government financial institution that strikes a balance in fulfilling its social mandate of promoting countryside development while remaining financially viable.

This dual function makes LANDBANK unique. The profits derived from its commercial banking operations are used to finance the Bank's developmental programs and initiatives.

Over the years, LANDBANK has successfully managed this tough balancing act as evidenced by the continued expansion of its loan portfolio in favor of its priority sectors: the farmers and fisherfolk, small and medium enterprises and microenterprises, livelihood loans and agribusiness, agri-infrastructure and other agri- and environment-related projects, socialized housing, schools, and hospitals.

LANDBANK also ranks among the top five commercial banks in the country in terms of deposits, assets, loans, and capital.

From its initial role as the financing arm of the agrarian reform, LANDBANK has evolved into a full-service commercial bank. But the essence of its existence has not changed at all — to make the countryside continuously throb with life.

As the world's largest and most trusted cloud delivery platform, Akamai makes it easier for its customers to provide the best and most secure digital experiences on any device, anytime, anywhere. Akamai's massively distributed platform is unparalleled in scale with over 200,000 servers across 130 countries, giving customers superior performance and threat protection.
