Managed Service for DNS Posture Management

Organizations today face increasing challenges in managing their DNS posture and ensuring that their infrastructure is continuously protected from DNS-based attacks. Akamai DNS Posture Management is an automated, continuous monitoring platform that provides centralized, multicloud visibility across your entire DNS ecosystem.

Managed Service for DNS Posture Management further strengthens your security posture with 24/7 monitoring of alerts, rapid threat remediation, proactive notifications, quarterly reviews, and direct access to Akamai experts.

Managed Service for DNS Posture Management offloads the responsibility of monitoring your DNS posture in an increasingly complex landscape. Akamai closes the gaps that often go unseen, protecting critical DNS infrastructure and digital certificates.

Network environments are widely distributed, with multiple departments and acquired teams often following different **manual processes** across multiple providers.

- Akamai's Security Operations Command Center (SOCC) provides global, 24/7 monitoring, remediation, and escalation of high-severity alerts according to a personalized runbook.

Misconfigurations expose vulnerabilities, creating a significant **compliance** risk.

- Quarterly security posture reviews with actionable recommendations ensure that detected issues are resolved and the root causes can be addressed.

IT teams are busy with their regular workload and don't have **resources** available to monitor for issues or remediate misconfigured DNS zones and certificates.

- Akamai provides a team of security experts that scales automatically with your growing infrastructure, enabling better collaboration between security and networking teams.

Attackers continuously discover **new vulnerabilities** and attack vectors, making it difficult for IT to keep up with the latest best practices and standards.

- Akamai's extensive experience keeping our customers' systems protected from ongoing attacks ensures we're aware of the best ways to protect your infrastructure.

- Proactive risk assessment and threat notification keep you abreast of evolving risks.

- On-demand expert guidance is only a phone call away.

Benefits for your business

Staff augmentation
Let Akamai monitor and remediate your DNS and certificate misconfigurations with our global, 24/7 team to prevent costly attacks before they happen

Actionable recommendations
Regular security posture reviews with actionable recommendations help to detect and address DNS misconfigurations, compliance gaps, and vulnerabilities

Best practices
Get expert advice on the latest best practices for infrastructure security to counter emerging threats
