For U.S. Federal Government

How to Purchase Akamai Solutions

Akamai security solutions enable U.S. federal departments and agencies to meet their most rigorous security, modernization, and user experience challenges — without sacrificing performance.

How to purchase

Akamai solutions are available to U.S. federal customers through multiple compliant acquisition paths, including federal contract vehicles, authorized partners and resellers, prime contractors, and Other Transaction Authority (OTA) consortia. If you are unsure which path is best, Akamai can help identify the right vehicle for your mission.

To purchase an Akamai solution, please complete the following four-step process:

Step 1: Choose your procurement path

- **Federal contract vehicles**
  Federal agencies may procure Akamai using standard federal acquisition methods in accordance with agency ordering procedures. This path is best for civilian agencies and FAR-based procurement.

- **Department of War (DoW) and BPA-based procurement**
  DoW customers may procure Akamai through approved enterprise software vehicles and BPA constructs, following established ordering guidance. This path is best for DoW programs using standardized or enterprise acquisition models.

- **Partners, resellers, and prime contractors**
  Akamai solutions are available through authorized partners, resellers, and prime contractors, depending on agency requirements and contract structure. This path is commonly used when Akamai is:
  - Part of a larger system or program
  - Included in a bundled or multi-vendor solution
  - Delivered alongside integration or managed services

  If you are unsure whether to purchase directly, through a partner, or under a prime contract, Akamai can help determine the most efficient and compliant approach.

- **Other Transaction Authority (OTA) vehicles**
  Akamai participates in multiple DoW-aligned OTA consortia that support rapid prototyping, pilot deployments, and transition to production. Available OTA vehicles include: commonly used when Akamai is:
  - C5 PEO IEW&S OTA – W15QKN1795555
  - Supply Chain Consortium Initiative (SCCI) – FA81091990001
  - Open Technology and Agility for Innovation (AFRL OTAFI) – FA87502199000
  - Cyber Operations OTA (COBRA) – W909MY229B001
  - AFLCMC Consortium Initiative (ACI) – FA86842190003

  This path is best for innovation efforts, cyber operations, Zero Trust pilots, and rapid mission needs.

Contact Akamai to determine the best buying option

Akamai

Step 2: Request a quote

To receive an order-ready quote, please provide:

- Agency and program name
- Required capabilities and deployment environment
- Period of performance
- Preferred acquisition path (if known)

Request a federal quote

Step 3: Issue the order

Your contracting office issues the order using the selected contract vehicle, OTA, partner, or prime contractor.

Step 4: Award execution and service commencement

Upon contract award or order issuance, Akamai will work with you and the authorized partner or prime contractor to initiate contract performance, including:

- Kickoff and implementation planning
- Coordination of technical activities and milestones
- Commencement of services in accordance with the contract terms
