

# Meet the Security Technology Group (STG)

# ▶▶ OVERVIEW

The Security Technology Group (STG)'s mission is to protect life online. STG includes a variety of teams that focus on information security (InfoSec), security product development, microsegmentation, mobile security, enterprise security, fraud prevention, and API protection. Our major products provide application protection, enterprise application protection, account takeover protection, and DDoS protection. Students and recent grads who join our Security Technology Group will help keep businesses safe from threats and ensure that Akamai's solutions continue to meet the ever-changing demands of the security landscape.

## OUR ROLES

- Security Engineer
- Software Engineer
- Data Scientist
- InfoSec

## DO WHAT YOU LOVE

Are you curious about the latest in cybersecurity development? Our Security Technology Group is full of driven, intelligent minds and is always looking to bring on new people with innovative ideas. Assignments may work with our major security products like Prolexic or Bot Manager, conduct security research with our InfoSec group, analyze threat data, and more. Assignments will work directly with our security products, data, and research, and have a real-world impact on cybersecurity for our customers.

# ARE YOU A GOOD FIT?

To be successful in our Security Technology Group, participants must be curious to learn about the latest in cybersecurity and possess an innovative, collaborative attitude. Our engineering teams work in languages like Python, SQL, Java, JavaScript, PHP, and many more. By the end of the assignment, participants will have gained an in-depth understanding of the latest technological advancements in cybersecurity and learned to work in a fast-moving environment with an innovative global team.
