

Synarion IT Powered Growth with Akamai Cloud

Award-winning IT services company unlocked uptime, predictable pricing, and local support with Akamai Cloud and CloudMinister

Enjoyed seamless migration

100%

Achieved 100% uptime

Gained local support

Leading the way in digital transformation

Based in India, Synarion IT Solutions is an award-winning IT services company with a global presence across the United States, the United Kingdom, the United Arab Emirates, and Canada. From custom software development to full-scale digital marketing, Synarion helps businesses thrive in an increasingly digital world. To overcome the limitations of AWS, the company partnered with CloudMinister for local infrastructure management and Akamai for cloud computing services. The result? Faster deployment, 100% uptime, and greater confidence in delivering reliable, cost-effective solutions to clients worldwide.

Held back by hidden costs and delayed support

With clients across industries and geographies, Synarion is known for helping businesses navigate and succeed in the digital landscape. As the company grew, so did its challenges — especially with its cloud infrastructure. Unresponsive support from AWS, unpredictable pricing, and constant time drains for its IT team limited Synarion's ability to serve clients efficiently and scale its business.

"We are in the business of supporting clients with app development and management, and can't afford these delays. We lost clients in some cases because AWS didn't respond to our needs fast enough," said Manoj Sharma, Founder and CTO of Synarion.

AWS also lacked a clear pricing model that Synarion could pass on to clients. "Every client needs to know the monthly costs before working with us. But not all cloud platforms provide that predictability."

Cloud Computing

Finding a local, reliable partner

To address these issues, Synarion turned to CloudMinister, a local IT services provider, and migrated its infrastructure to Akamai Cloud. “We really wanted to work with a local company after our experience with AWS,” Sharma said.

That decision paid off immediately. The combined local support from CloudMinister and Akamai made the transition seamless. “We thought the move would take lots of our time and energy, but were pleasantly surprised how seamlessly it went.”

Cost savings, reliability, and simplicity

Since shifting to Akamai Cloud, Synarion has seen measurable gains. Latency and bandwidth issues disappeared, and infrastructure costs dropped.

“Previously, we were charged a lot for extra services. With Akamai, we pay a fixed cost for access to a huge number of services — including [DDoS](#) protection — and bandwidth is unlimited, so we have 100% availability,” Sharma said.

Deployment, too, has become easier. “It’s simple to deploy an application or new service. Any of our developers can do it in just minutes,” he added.

And when support is needed, Akamai is quick to respond, enabling Synarion to deliver reliable service. “Akamai responds so quickly when we reach out. As a result, we are no longer losing clients.”

Scaling quickly with local support

During one cricket match, a fantasy sports app developed by Synarion buckled under a massive traffic spike. Synarion turned to CloudMinister, which responded immediately by scaling Akamai cloud computing servers to handle the load.

“Our client was very happy when the application returned to working smoothly. It’s an example of what a huge advantage it is to work with local teams,” Sharma recalled.

“

With Akamai and CloudMinister, we give our clients predictable costs and 100% uptime — and still have time to focus on innovation.

– Manoj Sharma
Founder and CTO,
Synarion IT Solutions

“

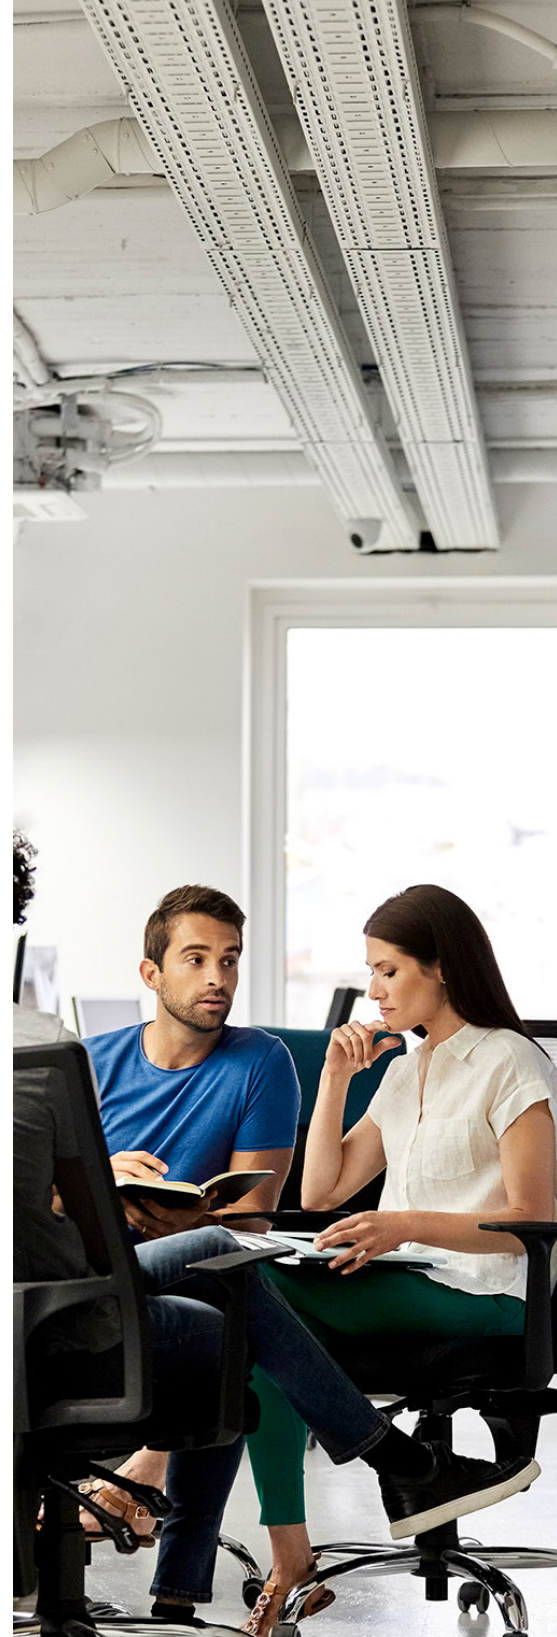

With CloudMinister’s reliable and responsive support — and Akamai’s scalable, secure, dependable cloud computing services — we have the foundation we need to keep growing.

 Founder and CTO, Synarion IT Solutions

More time to grow and innovate

With CloudMinister managing infrastructure and Akamai providing reliable, secure, and scalable [cloud computing services](#), Synarion’s internal teams are free to focus on growth and innovation. “Akamai is my first choice for cloud computing. We can give our clients what they want and need, while innovating to grow our business,” said Sharma.

For Synarion, the future is bright — and built on strong partnerships. “CloudMinister is the responsive, reliable partner we wanted. And Akamai provides all the reliable, scalable, secure cloud computing services we need. Because of these two companies, our business will continue growing,” Sharma concluded.

Synarion IT Solutions is a globally recognized digital transformation company specializing in mobile app development, web platforms, immersive game design, and enterprise software.
