How advanced is your organization's security posture?

Prior to implementing Zero Trust security, you should evaluate your enterprise's level of preparedness to successfully evolve and implement a new framework.

Here are seven essential questions to ask yourself to determine your organization's state of Zero Trust readiness:

1. How do you currently provide enterprise application access for your users?

2. How isolated is your network infrastructure from the public Internet?

3. Which methods of corporate application protection do you have in place today?

4. Which methods of identity authentication and authorization do you use before providing access to your users?

5. Which threat protection capabilities do you have in place to defend your users and devices?

6. To what extent are you able to monitor Internet-bound traffic and activity?

7. What integrations and configurations do your security solutions support?

Read this paper to learn more about the security and business benefits of Zero Trust or **contact an Akamai specialist** to discuss a customized action plan for security transformation.

Akamai secures and delivers digital experiences for the world's largest companies. Akamai's intelligent edge platform surrounds everything, from the enterprise to the cloud, so customers and their businesses can be fast, smart, and secure. Top brands globally rely on Akamai to help them realize competitive advantage through agile solutions that extend the power of their multi-cloud architectures. Akamai keeps decisions, apps, and experiences closer to users than anyone — and attacks and threats far away. Akamai's portfolio of edge security, web and mobile performance, enterprise access, and video delivery solutions is supported by unmatched customer service, analytics, and 24/7/365 monitoring. To learn why the world's top brands trust Akamai, visit www.akamai.com, blogs.akamai.com, or @Akamai on Twitter. You can find our global contact information at www.akamai.com/locations.
