Where does Akamai fit the IOT Firmware Workflow for OEM’s?

1. **UPDATE CREATION**
   - Software updates scheduled and packaged by auto OEMs.
   - Head unit and fleet management system identifies vehicles for software updates and provides reporting.

2. **UPDATE MANAGEMENT**
   - The verification of the secret credentials between the vehicle and the fleet management system to ensure an authorized exchange.

3. **AUTHENTICATION**
   - Transport Layer Security protects the software delivery to the vehicles.

4. **SECURE DELIVERY**
   - Data insights provides the status of software update delivery and installation completion per vehicle.

5. **CONFIRMATION & INSTALLATION**
   - Increased scalability, security, performance and insight across the workflow.
